HISTORIC FRANKLIN TENNESSEE

MEMORANDUM

DATE: April 20, 2016

TO: Franklin Municipal Planning Commission

FROM: Amy Diaz-Barriga, Current Planning Supervisor
Bob Martin, Interim Director of Planning and Sustainability

Subject

..title

Consideration Of Ordinance 2016-008, To Be Entitled, "An Ordinance To Rezone 30.39 Acres From General Commercial (GC) District To Specific Development-Residential (SD-R 11.7) District For The Property Located West Of Interstate 65, At 840 And 880 Oak Meadow Drive."

..body

Project Information

COF Project Number: 6085
Applicant: **Adam Crunk, Crunk Engineering**
Owner: **Warner Bass**

Background/Staff Comments

Any request for an SD zoning district is required to be accompanied by a PUD Development Plan. Neither the Planning nor Engineering Departments support the PUD Development Plan associated with this rezoning, and therefore cannot support this rezoning request. There are conceptual flaws on the site design of the Development Plan. The plan will cater to cars and not residents, and will have little regard for creating open spaces and a site experience to benefit its residents. Engineering is skeptical that the conceptual design of its stormwater detention and water quality will be sufficient in size to handle the run-off of the site.

Further, the proposed use at the requested density will ignite traffic concerns for the area, which at this point are unresolved in the applicant's provided traffic study. The intersection of South Royal Oaks Boulevard and Riverside Drive is currently at an unacceptable level, and the applicant's study is lacking the documentation and analysis of how their proposed off-site improvements will alleviate some of the current congestion. Without data to support the study's claims, this rezoning request seems premature.

Project Considerations

Project Considerations are not conditions of this approval, but are intended to highlight issues that should be considered in the overall site design or may be required when more detailed plans are submitted for review. These items are not meant to be exhaustive and all City requirements and ordinances must be met with each plan submittal.

Regarding the requested analysis for South Royal Oaks & Center Point/Riverside to investigate protected/permitted left turn phasing for the side streets, this was not performed. Furthermore, the Synchro technical analyses using permitted left turns on the side streets show errors. The applicant shall correct the errors and investigate the protected/permitted left turn phasing for the side streets. Staff has informed the applicant that the City of Franklin's preliminary investigation of such phasing shows improvements in intersection operations. The applicant shall also address the 3rd party review comments as approved by the City Traffic Engineer and uploaded into IDT.

Recommendation

ORDINANCE 2016-008

TO BE ENTITLED, "AN ORDINANCE TO REZONE 30.39 ACRES FROM GENERAL COMMERCIAL (GC) DISTRICT TO SPECIFIC DEVELOPMENT-RESIDENTIAL (SD-R 12) DISTRICT FOR THE PROPERTY LOCATED WEST OF INTERSTATE 65, AT 840 AND 880 OAK MEADOW DRIVE."

WHEREAS, the City of Franklin, Tennessee, encourages responsible growth and the sensible transition of land uses and densities; and

WHEREAS, the Specific Development-Residential district provides zoning for land uses compatible with both the Franklin Land Use Plan and surrounding development; and

WHEREAS, the Board of Mayor and Alderman (BOMA) of the City of Franklin, Tennessee, adopted Resolution 2016-20, approving a Plan Unit Development (PUD) Development Plan as required by the Franklin Zoning Ordinance; and

WHEREAS, the zoning has been reviewed and approved by BOMA after a public hearing and a recommendation by the Franklin Municipal Planning Commission.

NOW THEREFORE BE IT ORDAINED BY THE BOARD OF MAYOR AND ALDERMAN OF THE CITY OF FRANKLIN, TENNESSEE, AS FOLLOWS:

SECTION I. That the following described property shall be, and is hereby, rezoned from its present zoning classification of **GC** District to **SD-R (12.0)** District:

NO. 1797 WHOSE ADDRESS IS RAGAN SMITH ASSOCIATES, 315 WOODLAND STREET, NASHVILLE, TN 37206 AND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:
COMMENCING AT AN IRON ROD (OLD) WITH CAP STAMPED “RAGAN-SMITH ASSOCIATES” (RSA), SAID PIN BEING IN THE EASTERLY RIGHT-OF-WAY OF SOUTH ROYAL OAKS BOULEVARD AND BEING THE NORTH END OF A CURVE AT THE INTERSECTION OF THE EAST RIGHT-OF-WAY LINE OF SOUTH ROYAL OAKS BOULEVARD AND THE NORTH RIGHT-OF-WAY LINE OF OAK MEADOW DRIVE AND BEING A WESTERLY CORNER OF LOT 30 OF THE FINAL PLAT ENTITLED “WATSON GLEN SUBDIVISION, SECTION 2 OF RECORD IN PLAT BOOK P43, PAGE 40, R.O.W.C.T.;
THENCE, WITH A CURVE TO THE LEFT HAVING A RADIUS OF 50.00 FEET, AN ARC LENGTH OF 73.83 FEET, A CENTRAL ANGLE OF 84 DEGREES 35 MINUTES 53 SECONDS, AND A CHORD BEARING AND DISTANCE OF SOUTH 06 DEGREES 29 MINUTES 38 SECONDS EAST, 67.30 FEET TO AN IRON ROD (OLD) WITH CAP STAMPED (RSA) IN THE NORTHERLY RIGHT-OF-WAY OF OAK MEADOW DRIVE (RIGHT-OF-WAY WIDTH VARIES);
THENCE, CONTINUING WITH SAID RIGHT-OF-WAY AND WITH THE SOUTHERLY LINE OF SAID LOT 30 THE FOLLOWING TWO CALLS:
1. SOUTH 48 DEGREES 47 MINUTES 29 SECONDS EAST, 157.42 FEET IRON ROD (OLD) WITH CAP STAMPED (RSA);
2. WITH A CURVE TO THE LEFT HAVING A RADIUS OF 750.00 FEET, AN ARC LENGTH OF 251.97 FEET, A CENTRAL ANGLE OF 19 DEGREES 14 MINUTES 55 SECONDS, AND A CHORD BEARING AND DISTANCE OF SOUTH 58 DEGREES 24 MINUTES 57 SECONDS EAST, 250.78 FEET TO AN IRON ROD (OLD) WITH CAP STAMPED (RSA) AT THE SOUTHWEST CORNER OF LOT 31 ON THE PLAN ENTITLED “WATSON GLEN SUBDIVISION, SECTION 2, REVISON 1, RESUBDIVISION OF LOT 31” OF RECORD IN PLAT BOOK P62, PAGE 45, R.O.W.C.T.;
THENCE, CONTINUING WITH SAID RIGHT-OF-WAY AND WITH THE SOUTHERLY LINE OF SAID LOT 31 THE FOLLOWING THREE CALLS:
1. WITH A CURVE TO THE LEFT HAVING A RADIUS OF 750.00 FEET, AN ARC LENGTH OF 116.20 FEET,

A CENTRAL ANGLE OF 08 DEGREES 52 MINUTES 38 SECONDS, AND A CHORD BEARING AND DISTANCE OF SOUTH 72 DEGREES 28 MINUTES 44 SECONDS EAST, 116.09 FEET TO AN IRON ROD (OLD) WITH CAP STAMPED (RSA);
2. SOUTH 76 DEGREES 55 MINUTES 03 SECONDS EAST, 811.13 FEET TO AN IRON ROD (OLD);
3. WITH A CURVE TO THE RIGHT HAVING A RADIUS OF 607.96 FEET, AN ARC LENGTH OF 43.08 FEET, A CENTRAL ANGLE OF 04 DEGREES 03 MINUTES 37 SECONDS, AND A CHORD BEARING AND DISTANCE OF SOUTH 74 DEGREES 53 MINUTES 15 SECONDS EAST, 43.07 FEET TO A PK NAIL (OLD) IN THE CENTERLINE OF AN ACCESS DRIVE, THE **POINT OF BEGINNING** OF THE HEREIN DESCRIBED TRACT OF LAND AND PROCEEEDING AS FOLLOWS:
4. THENCE, LEAVING SAID RIGHT-OF-WAY OF OAK MEADOW DRIVE WITH THE CENTERLINE OF SAID ACCESS DRIVE AND THE EAST LINE OF SAID LOT 31 ON THE PLAN ENTITLED "WATSON GLEN SUBDIVISION, SECTION 2, REVISON 1, RESUBDIVISION OF LOT 31" OF RECORD IN PLAT BOOK P62, PAGE 45, R.O.W.C.T.;NORTH 06 DEGREES 14 MINUTES 29 SECONDS EAST, 564.50 FEET TO A PK NAIL (OLD) IN THE SOUTH LINE OF LOT 2 AS SHOWN ON THE PLAN ENTITLED "WATSON GLEN SUBDIVISION, SECTION 1, REVISION 10, (RESUBDIVISION OF LOT 2 AND OF RIVERSIDE BUSINESS PARK SUBDIVISION, SECTION 1, REVISION 4, LOT 11);
THENCE, WITH THE SOUTH AND EAST LINE OF SAID LOT 2, THE FOLLOWING TWO BEARINGS AND DISTANCES:
1. SOUTH 83 DEGREES 35 MINUTES 44 SECONDS EAST, 73.68 FEET TO AN IRON ROD (OLD) WITH CAP STAMPED (RSA);
2. NORTH 06 DEGREES 24 MINUTES 16 SECONDS EAST, 708.89 FEET TO PUNCH HOLE IN A LIGHT BASE IN THE SOUTH LINE OF SAID LOT 10 OF FINAL PLAT ENTITLED "WATSON GLEN SUBDIVISION, SECTION 2";
THENCE, WITH THE SOUTH LINE OF SAID LOT 10, SOUTH 83 DEGREES 32 MINUTES 35 SECONDS EAST, 377.77 FEET TO CONCRETE MONUMENT OLD IN THE WESTERLY RIGHT-OF-WAY OF RIVERSIDE DRIVE (RIGHT-OF-WAY WIDTH VARIES);
THENCE, WITH THE WESTERLY RIGHT-OF-WAY OF RIVERSIDE DRIVE (IMPROVED AND UNIMPROVED ROAD), THE FOLLOWING FOUR CALLS:
1. SOUTH 07 DEGREES 40 MINUTES 29 SECONDS WEST, 577.88 FEET TO AN IRON ROD (OLD);
2. SOUTH 04 DEGREES 01 MINUTES 39 SECONDS WEST, 310.67 FEET TO AN IRON ROD (OLD);
3. WITH A CURVE TO THE LEFT HAVING A RADIUS OF 11300.00 FEET, AN ARC LENGTH OF 470.04 FEET, A CENTRAL ANGLE OF 02 DEGREES 23 MINUTES 00 SECONDS, AND A CHORD BEARING AND DISTANCE OF SOUTH 05 DEGREES 13 MINUTES 09 SECONDS WEST, 470.01 FEET TO A CONCRETE MONUMENT (OLD);
4. WITH A CURVE TO THE LEFT HAVING A RADIUS OF 11300.00 FEET, AN ARC LENGTH OF 112.73 FEET, A CENTRAL ANGLE OF 00 DEGREES 34 MINUTES 18 SECONDS, AND A CHORD BEARING AND DISTANCE OF SOUTH 06 DEGREES 41 MINUTES 48 SECONDS WEST, 112.73 FEET TO A CONCRETE MONUMENT (OLD);
THENCE, LEAVING SAID RIGHT-OF-WAY OF RIVERSIDE DRIVE AND WITH THE NORTH RIGHT-OF-WAY OF OAK MEADOW DRIVE (RIGHT-OF-WAY WIDTH VARIES) THE FOLLOWING TWO CALLS:
1. WITH A CURVE TO THE RIGHT HAVING A RADIUS OF 50.00 FEET, AN ARC LENGTH OF 123.89 FEET, A CENTRAL ANGLE OF 141 DEGREES 58 MINUTES 19 SECONDS, AND A CHORD BEARING AND DISTANCE OF SOUTH 77 DEGREES 58 MINUTES 06 SECONDS WEST, 94.54 FEET TO AN IRON ROD (OLD);
2. WITH A CURVE TO THE LEFT HAVING A RADIUS OF 607.96 FEET, AN ARC LENGTH OF 443.66 FEET, A CENTRAL ANGLE OF 41 DEGREES 48 MINUTES 42 SECONDS, AND A CHORD BEARING AND DISTANCE OF NORTH 51 DEGREES 57 MINUTES 06 SECONDS WEST, 433.88 FEET TO THE **POINT OF BEGINNING** AND CONTAINING 569,021 SQUARE FEET OR 13.06 ACRES, MORE OR LESS.

SECTION II: That the attached Location Map shall serve the purpose of further delimiting the geographical boundaries as described by this Ordinance.

SECTION III. BE IT FINALLY ORDAINED by the Board of Mayor and Aldermen of the City of Franklin, Tennessee, that this Ordinance shall take effect from and after its passage on third and final reading, the health, safety, and welfare of the citizens requiring it.

Table of Contents

1. INTRODUCTION

This traffic study has been prepared in order to identify the traffic impacts of a multi-family residential development that is proposed to be constructed on the north and south sides of Oak Meadow Drive, east of S. Royal Oaks Boulevard, in Franklin, Tennessee.

For the purposes of this study, existing and background traffic volumes were established, and capacity analyses were conducted for these conditions. Also, trip generation calculations were performed, and the trips which are expected to be generated by the proposed project were distributed to the roadway system and added to the background traffic volumes. The roadways and intersections which provide access to the site were then re-evaluated to determine the traffic impacts of the proposed project. Access needs for the project were evaluated, and the necessary roadway and/or traffic control improvements were identified. This report presents the results of these analyses and the subsequent recommendations.

It is important to note that the scope of this Traffic Impact Study was provided by the City of Franklin Engineering Department and their third-party private consultant, Neel-Schaffer, Inc. The approved scope is included in in Appendix A.

2. PROJECT DESCRIPTION

The location of the proposed project is shown in Figure 1. As shown, the project site is located on the north and south sides of Oak Meadow Drive, east of S. Royal Oaks Boulevard, in Franklin, Tennessee. The current project site plan is shown in Figure 2. As shown, the proposed plan includes 115 apartments on the south side of Oak Meadow Drive and 240 apartments on the north side of Oak Meadow Drive. Access for the southern portion of the site will be provided at two locations on Oak Meadow Drive, directly opposite two existing accesses for the Home Depot shopping center on the north side of Oak Meadow Drive. Access for the northern portion of the site will be provided at one location on the eastern access for the Home Depot shopping center on the north side of Oak Meadow Drive. Also, secondary access will be provided at the existing terminus of Riverside Drive.

In large part, economic and market considerations will dictate the pace and timing with which the proposed project is actually completed. The analyses conducted within this study are based on the estimation that the entire project will be completed within two years.

3. EXISTING TRAFFIC VOLUMES

In order to quantify the impact of the traffic that will be generated by the proposed project, peak hour traffic volumes were counted at the following locations:

1. Oak Meadow Drive and the project accesses
2. S. Royal Oaks Boulevard and Oak Meadow Drive
3. S. Royal Oaks Boulevard and Rand Place / Access for Home Depot
4. S. Royal Oaks Boulevard and Riverside Drive / Center Point Place

Also, the City of Franklin requested that peak hour traffic counts be collected for signal timing purposes at the following intersections:

5. Murfreesboro Road and Royal Oaks Boulevard
6. Murfreesboro Road and the Ramps for Southbound I-65
7. Murfreesboro Road and the Ramps for Northbound I-65

This data was collected during the morning and afternoon peak hours on typical weekdays in February 2016 when schools were in session. The raw traffic volumes are included in Appendix B. The existing laneage at the intersections within the study area is shown in Figure 3, and the existing peak hour traffic volumes are shown in Figure 4.

Using the existing peak hour traffic volumes shown in Figure 4, capacity analyses were conducted for the intersections counted. Specifically, in order to identify current peak hour levels of operation within the study area, the capacity calculations were performed according to the methods outlined in the Highway Capacity Manual 2010 (HCM2010). These analyses result in the determination of a Level of Service (LOS), which is a measure of evaluation is used to describe how well an intersection or roadway operates. LOS A represents free flow traffic operations, and LOS F suggests that the traffic demand exceeds the available capacity. In an urbanized area, LOS D is typically considered to be the minimum acceptable LOS. Table 1 presents the descriptions of LOS for signalized intersections, and Table 2 presents the descriptions of LOS for unsignalized intersections.

It is important to note that the City of Franklin Engineering Department provided the Synchro software files that were used to identify existing operations at the signalized intersections within the study area. Specifically, the files were updated to include the February 2016 traffic volumes. Also, the files were updated to reflect the recently-approved City ordinance that prohibits right-turns-on-red for the northbound right turns on S. Royal Oaks Boulevard at Murfreesboro Road.

The results of the capacity analyses for the existing peak hour traffic volumes are shown in Table 3, and Appendix C includes the capacity analyses worksheets.

TABLE 1. DESCRIPTIONS OF LOS FOR SIGNALIZED INTERSECTIONS

Level of Service	Description	Average Control Delay per Vehicle (sec)
A	Operations with very low control delay. Progression is extremely favorable, and most vehicles arrive during the green phase. Most vehicles do not stop at all. Short cycle lengths may also contribute to low delay.	≤ 10
B	Operations with stable flows. This generally occurs with good progression, short cycle lengths, or both. More vehicles stop than for LOS A, causing higher levels of average delay.	> 10 and ≤ 20
C	Operations with stable flow. Occurs with fair progression, longer cycle lengths, or both. Individual cycle failures may begin to appear at this level. The number of vehicles stopping is significant, although many still pass through the intersection without stopping.	> 20 and ≤ 35
D	Approaching unstable flow. The influence of congestion becomes more noticeable. Longer delays may result from some combination of unfavorable progression, long cycle lengths, or high v/c ratios. Many vehicles stop.	> 35 and ≤ 55
E	Unstable flow. In many cases, this is considered to be the limit for acceptable delay. These high delays generally indicate poor progression, long cycle lengths, and high v/c ratios.	> 55 and ≤ 80
F	Unacceptable delay. This condition often occurs with oversaturation or with high v/c ratios. Poor progression and long cycle lengths may also cause such delay levels.	> 80

4. PROJECTION OF BACKGROUND TRAFFIC VOLUMES

In order to account for the traffic growth which will occur within the study area because of typical growth, background traffic volumes were established for the intersections within the study area. Specifically, in order to account for typical growth within the study area, consideration was given to the historical traffic volumes near the project site. The Tennessee Department of Transportation (TDOT) conducts an annual count program throughout the state. This count program includes the annual collection of average daily traffic (ADT) counts at numerous fixed locations. As shown in Table 4, the daily traffic volumes within the study area have increased 2.65% per year since 2006. Based on this information, for the purposes of this study, the existing traffic volumes at the intersections within the study area were increased by 8% to represent initial background traffic volumes in the Year 2018, as shown in Figure 5A.

TABLE 4. HISTORICAL TRAFFIC VOLUMES IN THE STUDY AREA

Year	Station 164 S. Royal Oaks Blvd ADT	Annual Growth	
2006	18,274		
2007	17,787	-2.66%	
2008	20,374	14.54%	
2009	19,666	-3.48%	
2010	19,324	-1.74%	
2011	19,090	-1.21%	
2012	19,435	1.81%	
2013	20,343	4.67%	
2014	22,118	8.73%	**Overall Growth**
2015	22,638	2.35%	**2.65%**

Figure 5A.
Initial Background Peak Hour Traffic Volumes within the Study Area

It is important to note that a day care center is under construction on the north side of S. Royal Oaks Boulevard at Mack Hatcher Parkway, southwest of the proposed project. It is likely that a significant portion of the traffic that will be generated by the day care center will be pass-by traffic that is already traveling on the S. Royal Oaks Boulevard corridor. The 8% growth rate applied to the existing traffic volumes will account for the additional traffic that will be generated by the day care center.

Also, it is important to note that an assisted living facility with 208 beds is under construction on the north side of Oak Meadow Drive, opposite the southern project site for the proposed project. For the purposes of this study, trip generation calculations were conducted in order to identify how much traffic is expected to be generated by the assisted living facility. Trip generation data for daily and peak hour trips were identified from Trip Generation, Ninth Edition, which was published by the Institute of Transportation Engineers (ITE) in 2012. Table 5 presents the daily and peak hour trip generations, and these calculations are included in Appendix D.

TABLE 5. TRIP GENERATION (SOMERBY ASSISTED LIVING FACILITY)

LAND USE	SIZE	DAILY TRAFFIC	GENERATED TRAFFIC			
			AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Assisted Living Facility (LUC 254)	208 beds	570	34	13	30	47

Figures 5B and 5C include the directional distribution and assignment of peak hour traffic volumes that are expected to be generated by the assisted living facility.

The peak hour traffic volumes shown in Figures 5B and 5C were added to the traffic volumes shown in Figure 5A in order to establish the final background traffic volumes shown in Figure 5D. Using the background peak hour traffic volumes, capacity analyses were conducted for the intersections within the study area. For these analyses, it was assumed that all existing laneage and traffic control will be maintained and no improvements will be provided. The results of the capacity analyses for the background peak hour traffic volumes are shown in Table 5, and Appendix C includes the capacity analyses worksheets. These analyses indicate that the background conditions are consistent with the existing conditions within the study area.

5. IMPACTS OF PROPOSED DEVELOPMENT

5.1 TRIP GENERATION

Trip generation calculations were conducted in order to identify how much traffic will be generated by the proposed project. Trip generation data for daily and peak hour trips were identified from Trip Generation, Ninth Edition, which was published by the Institute of Transportation Engineers (ITE) in 2012. Table 6 presents the daily and peak hour trip generations for proposed townhomes, and these calculations are included in Appendix D.

TABLE 6. TRIP GENERATION

LAND USE	SIZE	DAILY TRAFFIC	GENERATED TRAFFIC			
			AM PEAK HOUR		PM PEAK HOUR	
			ENTER	EXIT	ENTER	EXIT
Multi-Family (LUC 220) **South Site**	115 units	764	12	47	46	25
Multi-Family (LUC 220) **North Site**	240 units	1,596	24	98	97	52
TOTAL	**355 units**	**2,360**	**36**	**145**	**143**	**77**

5.2 TRIP DISTRIBUTION AND TRAFFIC ASSIGNMENT

For the purposes of this study, it was estimated that the trips generated by the proposed project will access the project site according to the directional distribution shown in Figures 6A and 6B. It is important to note that these directional distributions were prepared with input and approval from the City of Franklin Engineering Department and their third-party private consultant, Neel-Schaffer, Inc. The development of these distributions was based on the following factors:

- existing land use characteristics,
- the directions of approach of the existing traffic,
- the access proposed for the project, and
- the locations of population centers in the area.

The peak hour trip generations and directional distributions were used to add the site-generated trips to the roadway system. Figures 7A, 7B, and 7C include the peak hour traffic volumes that are expected to be generated by the proposed project.

5.3 CAPACITY ANALYSES

In order to identify the projected peak hour traffic volumes at the completion of the proposed project, the trips generated by the project were added to the background peak hour traffic volumes. The resulting peak hour volumes are shown in Figure 8.

Using the total projected peak hour traffic volumes, capacity analyses were conducted in order to determine the impact of the project on the roadway system. Specifically, these capacity analyses were used to evaluate the need for roadway and traffic control improvements within the study area. For these analyses, the following assumptions were made:

- All existing laneage and traffic control will be maintained and no improvements will be provided.

- Each of the project accesses will be constructed to include one entering lane and one exiting lane.

The results of the capacity analyses for the total projected peak hour traffic volumes are shown in Table 7, and Appendix C includes the capacity analyses worksheets. These analyses indicate that the total projected conditions with full build-out of the project are consistent with the existing and background conditions within the study area.

5.4 CAPACITY ANALYSES

The results of the capacity analyses for the existing, background, and total projected peak hour traffic volumes are included in Tables 8 and 9 for comparison purposes. Also, the levels of service that worsen from background conditions to total projected conditions with the proposed project are highlighted in red. Finally, additional analyses were conducted in order to identify how well the intersections within the study area would operate if a third northbound through lane were provided on S. Royal Oaks between Oak Meadow Drive and Murfreesboro Road. Specifically, for these analyses, the northbound right turn lanes at Oak Meadow Drive, Rand Place, and Riverside Drive were converted to shared through/right turn lanes. The results of these additional analyses are shown in Tables 8 and 9. These comparisons and analyses that reveal poor levels of service are described below:

S. Royal Oaks Boulevard and Rand Place / Access for Home Depot
At this intersection, the westbound left turns from the Home Depot access operate at LOS E during the AM peak hour during the existing, background, and total projected conditions. Also, the eastbound left turns from the Rand Place operate at LOS E during the PM peak hour under total projected conditions. These results are typical at unsignalized intersections on major arterial roadways. Also, this intersection is not an appropriate location for a traffic signal installation because of its proximity to the existing traffic signal at Oak Meadow Drive. Therefore, the existing and projected levels of service for motorists on the side streets are reasonable and appropriate, and mitigation is not necessary.

S. Royal Oaks Boulevard and Riverside Drive / Center Point Place
This intersection operates at LOS F under existing, background, and total projected conditions. Specifically, these results occur because the northbound right turn volume at Murfreesboro Road, north of Riverside Drive, is significantly high during both peak hours, and these vehicles queue south toward Riverside Drive.

It is important to note that the eastbound and westbound turning movements operate with a single phase, without protected left turn signal phases. Capacity and simulation software indicates that a single phase operates more efficiently than protected-plus-permitted phases for the side streets. However, field observations indicate that the single phase is confusing for eastbound and westbound motorists, resulting in unnecessary delays and potential for vehicle conflicts. If the existing traffic signal were modified to include protected-plus-permitted signal phases rather than a single signal phase, eastbound and westbound motorists would likely experience longer delays but safer conditions. If the total time dedicated to the protected-plus-permitted signal phases does not exceed the single signal phase currently provided, this change would have a negligible impact on the northbound and southbound vehicle delays and queues.

Murfreesboro Road and Royal Oaks Boulevard
This intersection operates poorly during the PM peak hour under existing, background, and total projected conditions. Specifically, the traffic volumes for the eastbound throughs, westbound throughs, westbound left turns, and northbound right turns are all approximately equal during

both peak hours. Although some of these turning movements can operate during the same signal phases, the total time needed to serve all of the turning movements is significantly high. These conditions will persist unless the Murfreesboro Road corridor is widened to include three travel lanes in each direction.

Murfreesboro Road and the Ramps for Southbound I-65

This intersection operates poorly during the PM peak hour under existing, background, and total projected conditions. Specifically, the traffic volumes for the eastbound throughs, westbound throughs, and southbound right turns are all significantly high during both peak hours, and the traffic volume for the southbound left turns are significantly high during the PM peak hour. Although some of these turning movements can operate during the same signal phases, the total time needed to serve all of the turning movements is significantly high. These conditions will persist unless the Murfreesboro Road corridor is widened to include three travel lanes in each direction.

Murfreesboro Road and the Ramps for Northbound I-65

This intersection operates poorly during the AM peak hour under existing, background, and total projected conditions. Specifically, the traffic volumes for the eastbound left turns and westbound right turns are significantly high during the AM peak hour, and the traffic volumes for the eastbound throughs and westbound right turns are significantly high during the PM peak hour. These turning movements cannot operate during the same signal phases, and the total time needed to serve all of the turning movements is significantly high. These conditions will persist unless the Murfreesboro Road corridor is widened to include three travel lanes in each direction.

6. CONCLUSIONS AND RECOMMENDATIONS

The analyses presented in this study indicate the following information for the intersections that provide direct access to the project sites:

Oak Meadow Drive and the Eastern Project Access / Home Depot Access
At this intersection, the new project access should be constructed to include one entering lane and one exiting lane, and a stop sign should be installed on the northbound approach of the new access. The capacity analyses indicate that all of the vehicle queues and vehicle delays at this intersection will be very low.

Oak Meadow Drive and the Western Project Access / Home Depot Access
At this intersection, the new project access should be constructed to include one entering lane and one exiting lane, and a stop sign should be installed on the northbound approach of the new access. The capacity analyses indicate that all of the vehicle queues and vehicle delays at this intersection will be very low.

Eastern Home Depot Access and the Project Access for the Northern Apartments
At this intersection, the new project access should be constructed to include one entering lane and one exiting lane, and a stop sign should be installed on the westbound approach of the new access. The capacity analyses indicate that all of the vehicle queues and vehicle delays at this intersection will be very low.

S. Royal Oaks Boulevard and Oak Meadow Drive
The capacity analyses indicate that all of the turning movements at this intersection will operate at acceptable levels of service. Also, the existing lengths of the turn lanes are adequate to accommodate the total projected traffic volumes with the completion of the proposed project. Finally, it is important to note that the westbound approach of Oak Meadow Drive already includes separate left, through, and right turn lanes at the intersection with S. Royal Oaks Boulevard, and the existing traffic signal already includes a right turn overlap signal phase for westbound motorists. Therefore, there are no additional dedicated turn lanes or traffic control modifications that can be provided at this location. Field observations and traffic counts confirm that the northbound and southbound through volumes are significant, particularly the northbound through movement during the AM peak hour. However, the proposed project will have a minimal impact on these conditions.

S. Royal Oaks Boulevard and Rand Place / Access for Home Depot
The capacity analyses indicate that all of the critical turning movements at this unsignalized intersection will operate at acceptable levels of service. Also, the existing lengths of the turn lanes are adequate to accommodate the total projected traffic volumes with the completion of the proposed project. Field observations and traffic counts confirm that the northbound and southbound through volumes are significant, particularly the northbound through movement during the AM peak hour. Also, the field observations and traffic counts confirm that the eastbound and westbound left turn volumes are relatively low, presumably because left turns are challenging when the northbound and southbound through volumes are high. Also, the eastbound

and westbound motorists have access to the existing traffic signal at Oak Meadow Drive. It is important to note that proposed project will have a minimal impact on these conditions. Also, it is important to note that this intersection is not an appropriate location for a traffic signal installation because of its proximity to the existing traffic signal at Oak Meadow Drive.

S. Royal Oaks Boulevard and Riverside Drive / Center Point Place

The capacity analyses indicate that several turning movements at this intersection will operate at poor levels of service under existing, background, and total projected conditions. In particular, the southbound left turns, eastbound turns, and westbound left turns are expected to operate at poor levels of service but with reasonable vehicle queues. The vehicle delays for these turning movements can only be reduced by increasing the delays for northbound and southbound through vehicles. Specifically, the traffic signal would have to allocate more "green time" to the southbound left turns by reducing the "green time" for northbound throughs. Also, the traffic signal would have to allocate more "green time" to the eastbound and westbound turning movements by reducing the "green time" for northbound and southbound throughs. Field observations and traffic counts confirm that the northbound and southbound through volumes are significant, particularly the northbound through movement during the AM peak hour. Therefore, it is recommended that the northbound and southbound through movements be prioritized during the peak hours in order to minimize overall delays within the study area.

APPENDIX A
TRAFFIC IMPACT STUDY SCOPE PROVIDED BY
THE CITY OF FRANKLIN AND NEEL-SCHAFFER, INC.

Exhibit B

City of Franklin
Engineering Department

APPLICATION FORM
REQUEST FOR APPROVED TRANSPORTATION IMPACT ANALYSIS REPORT

Applicant Name:	Crunk Engineering .	Applicant Name:	Epoch Residential .
Address:	1894 Gen. George Patton.	Address:	359 Carolina Avenue .
	Franklin, TN 37067 .		Winter Park, FL 32789 .
Phone #:	(615) 873-1795 .	Phone #:	(321) 316-6005 .
e-mail address:	adam@crunkeng.com .	e-mail address:	mccarley@epochresidential.com .

PROCESS OVERVIEW

A Transportation Impact Analysis shall be prepared by the Applicant's Consultant or the City's Traffic Consultant using the standard format specified by the Institute of Transportation Engineers in accordance with the following:

(i) The applicant shall submit a completed *Request for Transportation Impact Analysis Application Form* to the Engineering Department.

(ii) Scope of Services
   a. Following initial review of the application form, the Engineering Department shall prepare and submit a Scope of Services and schedule to the Applicant. If necessary a meeting will be scheduled to review and discuss the Scope of Services in detail.
   b. Following approval the applicant will pay the City 90% of the estimated cost of the traffic impact study. At the completion of the study the City shall reimburse the applicant all remaining fees.

(iii) Transportation impact analyses shall be prepared utilizing traffic data that are consistent with:
   a. The land use and density data as referenced in the most current edition of Trip Generation, published by the Institute of Transportation Engineers;
   b. Current city and state traffic counts for surrounding streets;
   c. Any additional traffic counts performed as a part of preparing the study.

Attachment A

City of Franklin Review Process for Transportation Impact Analysis

Step 1 – Preliminary discussion with Consultant/Developer on project description including site plan.
Step 2 – Scoping of Transportation Impact Analysis between the City of Franklin and Consultant/Developer.
Step 3 – Consultant, Traffic Engineer and Director of Engineering execute a MOU (Fees may apply per COF Ordinance 2015-64.
Step 4 – Consultant/Developer pays review fee and submits Transportation Impact Analysis.
Step 5 – City of Franklin prepares initial comments on the transportation impact analysis, if necessary.

Step 6 – Consultant submits corrections/revisions to the transportation impact analysis, if necessary.
Step 7 – City of Franklin prepares initial comments on proposed mitigation measures, if necessary
Step 8 – Consultant submits corrections/revisions on proposed mitigation measures, if necessary and electronic copy of the transportation impact analysis.
Step 9 – City of Franklin issues an assessment letter

Attachment B

Transportation Impact Analysis – Memorandum of Understanding (MOU)

This MOU acknowledges that the transportation impact analysis for the following project will be prepared in accordance with the latest version of City of Franklin Zoning Ordinance.

Project Name: Epoch Franklin .
Project Address: Oak Meadow Drive, east of S. Royal Oaks Boulevard .
Project Description: 352 apartments (240 units on north side, 112 apts on the south side) .

Attach a site map and a trip generation table with a description of the proposed land uses, ITE rates, estimated daily, morning, midday and afternoon peak hour volumes (ins/outs/totals), proposed trip credits, etc.

Project Buildout Year: 2018 Ambient or CMP Growth Rate: : 4 % Per Yr.

Study Intersections:

1. Oak Meadow Drive and Private Road for Home Depot / western project access	9. Oak Meadow Drive and the eastern project accesses
2. S. Royal Oaks Blvd and Oak Meadow Dr	10.
3. S. Royal Oaks Blvd and Center Point Pl / Riverside Dr	11.
4. Highway 96E and Royal Oaks Blvd (for data collection and signal timing purposes only)	12.
5. Highway 96E and Ramps for SB I-65(for data collection and signal timing purposes only)	13.
6. Highway 96E and Ramps for NB I-65(for data collection and signal timing purposes only)	14.

Trip Credits: (Exact amount of credit subject to approval by City of Franklin)

	Yes	No
Transit Usage		X
Existing Active Land Use		X
Previous Land Use		X
Internal Trip		X
Pass-By Trip		X

Approved By: _____ _____

City of Franklin Traffic Engineer Director of Engineering

Reason for Request: (Planned Unit Development, Site Plan, Rezoning)

site plan

Description of Proposed Project (Address, Map/Parcel Number, etc.) (Attach a conceptual development plans showing all access points and adjacent streets.):

079 08800 00009079

079 10105 00109079

Existing Land Use (be specific):

undeveloped

Proposed Land Use (be specific):

240 apartments on 13.06 acres (north) and 112 apartments on 18.87 acres (south)

Potential Development Yield (number of residential units; building square footage, projected number of employees, hours of operations):

352 apartments

As applicant, I agree to pay to the City of Franklin 90% of the entire cost of the Transportation Impact Analysis.

Property Owner Signature: _____

Property Owner Title: _____

Date: _____

The information above shall be submitted to the Engineering Department (109 3rd Ave South; Franklin, TN 37064) to review and provide estimated cost along with a proposed scope of services. All questions should be directed to Carl Baughman, Traffic Engineer III (615-791-3218).

Intersection Summary			
Area Type:	Other		
Cycle Length: 150			
Actuated Cycle Length: 150			
Offset: 123 (82%), Referenced to phase 2:SBSW and 6:NBT, Start of Green			
Natural Cycle: 150			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: Err			
Intersection Signal Delay: Err		Intersection LOS: F	
Intersection Capacity Utilization Err%		ICU Level of Service H	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

! Phase conflict between lane groups.

Splits and Phases: 24: S Royal Oaks & Riverside Dr & Center Point Pl

Intersection Summary

Area Type:	Other		
Cycle Length: 150			
Actuated Cycle Length: 150			
Offset: 138 (92%), Referenced to phase 2:WBT and 6:EBT, Start of Green			
Natural Cycle: 150			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 0.91			
Intersection Signal Delay: 34.2		Intersection LOS: C	
Intersection Capacity Utilization 84.7%		ICU Level of Service E	
Analysis Period (min) 15			
m Volume for 95th percentile queue is metered by upstream signal.			

Splits and Phases: 9: Exit ramp from I-65/Ent ramp to I-65 & Highway 96

Intersection Summary			
Area Type:	Other		
Cycle Length: 150			
Actuated Cycle Length: 150			
Offset: 123 (82%), Referenced to phase 2:SBSW and 6:NBT, Start of Green			
Natural Cycle: 150			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: Err			
Intersection Signal Delay: Err		Intersection LOS: F	
Intersection Capacity Utilization Err%		ICU Level of Service H	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

! Phase conflict between lane groups.

Intersection Summary

Area Type:	Other		
Cycle Length: 140			
Actuated Cycle Length: 140			
Offset: 106 (76%), Referenced to phase 2:WBT and 6:EBT, Start of Green			
Natural Cycle: 140			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 1.09			
Intersection Signal Delay: 41.9		Intersection LOS: D	
Intersection Capacity Utilization 108.8%		ICU Level of Service G	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 8: Ent ramp to I-65/Exit ramp from I-65 & Highway 96

Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 24: S Royal Oaks & Riverside Dr & Center Point Pl

Intersection Summary

Area Type:	Other		
Cycle Length: 150			
Actuated Cycle Length: 150			
Offset: 138 (92%), Referenced to phase 2:WBT and 6:EBT, Start of Green			
Natural Cycle: 150			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: 0.91			
Intersection Signal Delay: 35.2		Intersection LOS: D	
Intersection Capacity Utilization 84.9%		ICU Level of Service E	
Analysis Period (min) 15			
m Volume for 95th percentile queue is metered by upstream signal.			

Splits and Phases: 9: Exit ramp from I-65/Ent ramp to I-65 & Highway 96

Intersection Summary			
Area Type:	Other		
Cycle Length: 150			
Actuated Cycle Length: 150			
Offset: 123 (82%), Referenced to phase 2:SBSW and 6:NBT, Start of Green			
Natural Cycle: 150			
Control Type: Actuated-Coordinated			
Maximum v/c Ratio: Err			
Intersection Signal Delay: Err		Intersection LOS: F	
Intersection Capacity Utilization Err%		ICU Level of Service H	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

! Phase conflict between lane groups.

Splits and Phases: 24: S Royal Oaks & Riverside Dr & Center Point Pl

Intersection Capacity Utilization Err%		ICU Level of Service H	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Capacity Utilization 90.4% ICU Level of Service E
Analysis Period (min) 15
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 7: S Royal Oaks/N Royal Oaks & Highway 96

APPENDIX D
TRIP GENERATION

TRIP GENERATION CALCULATIONS – Assisted Living

The following calculations are based on the data compiled for ITE Land Use Code 254.

Average Daily Traffic

T = 2.74 (X)
T = 2.74 (**208**)
T = 570 vehicles

Enter = 0.50 (570) = 285 vehicles
Exit = 0.50 (570) = 285 vehicles

AM traffic during peak hour of adjacent street

T = 0.23 (X)
T = 0.23 (**208**)
T = 47 vehicles

Enter = 0.72 (47) = 34 vehicles
Exit = 0.28 (47) = 13 vehicles

PM traffic during peak hour of adjacent street

T = 0.37 (X)
T = 0.37 (**208**)
T = 77 vehicles

Enter = 0.39 (77) = 30 vehicles
Exit = 0.61 (77) = 47 vehicles

TRIP GENERATION CALCULATIONS – Multi-Family (North)

The following calculations are based on the data compiled for ITE Land Use Code 220.

Average Daily Traffic

T = 6.65 (X)
T = 6.65 (**240**)
T = 1,596 vehicle-trips

Enter = 0.50 (1,596) = 798 vehicles
Exit = 0.50 (1,596) = 798 vehicles

A.M. traffic during peak hour of adjacent street

T = 0.51 (X)
T = 0.51 (**240**)
T = 122 vehicle-trips

Enter = 0.20 (122) = 24 vehicles
Exit = 0.80 (122) = 98 vehicles

P.M. traffic during peak hour of adjacent street

T = 0.62 (X)
T = 0.62 (**240**)
T = 149 vehicle-trips

Enter = 0.65 (149) = 97 vehicles
Exit = 0.35 (149) = 52 vehicles

TRIP GENERATION CALCULATIONS – Multi-Family (South)

The following calculations are based on the data compiled for ITE Land Use Code 220.

Average Daily Traffic

T = 6.65 (X)
T = 6.65 (**115**)
T = 764 vehicle-trips

Enter = 0.50 (764) = 382 vehicles
Exit = 0.50 (764) = 382 vehicles

A.M. traffic during peak hour of adjacent street

T = 0.51 (X)
T = 0.51 (**115**)
T = 59 vehicle-trips

Enter = 0.20 (59) = 12 vehicles
Exit = 0.80 (59) = 47 vehicles

P.M. traffic during peak hour of adjacent street

T = 0.62 (X)
T = 0.62 (**115**)
T = 71 vehicle-trips

Enter = 0.65 (71) = 46 vehicles
Exit = 0.35 (71) = 25 vehicles

Subject: Review of Updated Traffic Impact Study
Epoch Apartments – Oak Meadow Drive

Dear Carl:

Per your request, we have completed a review of the updated traffic study for the referenced proposed project. In response to staff and Neel-Schaffer comments, the applicant submitted a revised traffic study. This correspondence documents our follow-up remarks on the updated report.

- For the intersection of S. Royal Oaks Blvd and Riverside Dr., the study provided additional comments as requested (in new section 5.4 and updated section 6.0) about modifying the phasing of the traffic signal. The report addressed comments regarding the possibility of changing the signal phasing from its existing concurrent permissive-only side street phasing to protected-permitted left turn phasing. The study reported that the existing concurrent phasing results in more efficient (lower delay) operation, but that protected-permissive phasing might reduce driver indecision thereby allowing side street drivers to make more definitive turning movements. Our review did not find details documenting the protected-permissive phasing alternative in the appendix.

  We request, in conjunction with staff, that the study provide analysis print-outs in the appendix documenting the protected-permissive scenario. We desire to compare the AM and PM peak results of the two phasing options.

- The study, as requested, provided additional remarks (in new section 5.4) regarding level-of-service operation of Murfreesboro Rd at I-65 NB and SB ramps. The study attributed the continued unsatisfactory peak period levels-of-service to the significant traffic volumes traveling through the intersections/corridor. As mentioned in our original review memo, but not further addressed in the updated study, continued monitoring and updated traffic signal timings can help provide some mitigation.

- For the Eastern Home Depot Access Road and Project Access for the Northern Apartments intersection, we have two suggestions as potential improvement measures. First, we would recommend a more direct (less angled) connection between the apartment complex area and the Home Depot Access road. Also, we suggest that there be separate westbound left and right exit lanes (i.e. three-lane cross section) at the driveway intersection. The updated traffic study did not comment or address these remarks from the original review.

- For the Oak Meadow Drive and Eastern Project Access / Home Depot Access intersection, the updated traffic study did not address our original comments:
  - Emphasis that the design process consider and provide appropriate intersection sight distance for drivers exiting the south (NB) driveway access (recognizing the horizontal curve just to the east of the intersection)
  - Emphasis on addressing possible sight distance limitations for drivers traveling northbound/westbound on Oak Meadow Drive approaching the eastern driveway intersection. Proposed measures could include new signs, proper design/placement of proposed landscaping and removal of existing vegetation/overgrowth.
  - We recommend that the eastbound and westbound approaches of Oak Meadow Drive be modified to provide dedicated left-turn lanes as described in our original review

- For the Oak Meadow Drive and Western Project Access / Home Depot Access intersection, the updated traffic study did not address our original comments:
  - Recommendation of re-application of pavement markings on the Home Depot access road, including double-yellow centerline
  - Recommendation to modify the eastbound and westbound approaches of Oak Meadow Drive to provide dedicated left-turn lanes as described in our original review

- For the S. Royal Oaks Boulevard and Rand Place / Home Depot Access Road intersection, the updated traffic study did not address our original comments:
  - Recommendation for re-application of the westbound approach pavement markings as noted in our original review
  - We also suggest consideration be given to modifying the lane assignments for the westbound approach. Because of the predominant westbound right-turn movement, we suggest that the outside (curb) lane be converted to a right-turn only lane with the inside lane operating as a shared through-left lane. If pursued, this change would require new lane line pavement markings, turn arrow pavement markings and signing as mentioned in the original review

- Regarding Oak Meadow Drive, we suggest consideration be given to lowering the posted speed limit. We believe it may be appropriate to lower the speed limit along Oak Meadow Drive between S. Royal Oaks Blvd and the Home Depot eastern access driveway (currently 40mph) due to the proposed increase in active driveway connections and traffic volumes.

- The revised traffic study updated and/or adequately addressed all other comments provided in Neel-Schaffer's original review.

We appreciate the opportunity to provide our review comments and participate in the planning process. Please let us know if you need any additional information or have any questions.

Sincerely,
NEEL-SCHAFFER, INC.

Gregory Judy, P.E., PTOE
Engineer Manager

CITY OF FRANKLIN PROJECT NO. 6085

APRIL 7 2016

PREPARED FOR:

EPOCH RESIDENTIAL

359 Carolina Avenue
Winter Park, Florida
(407) 644-9055

STATEMENT OF IMPACT - POLICE, FIRE, SOLID WASTE, PARKS:
The proposed project will add 355 multi-family units. The property is currently undeveloped within the existing City Limits of the City of Franklin. Therefore, no new land is being developed outside the existing jurisdiction of City of Franklin Police, Fire, or Solid Waste services.

The project is approximately a 4 mile driving distance from the Police Station; 1.5 mile driving distance from the nearest fire station on Murfreesboro Rd.
The project will have two dumpster locations for solid waste. One serving 240 units and the other serving 115 units.
No new parkland is being dedicated as part of this project. However, this project will contribute to parkland funds.

STATEMENT OF IMPACT - STORMWATER:

The proposed development contains two site features that will be protected during construction. The south site contains a wetland area as well as a stream, Watson Branch. the site has been designed not to impact these site features. The required buffers for each feature have been shown on these plans.

STATEMENT OF IMPACT - TRANSPORTATION:
The proposed project will add 355 multi-family units with access along Oak Meadow Drive and Riverside Drive. The primary road corridor serving the project is the major arterial South Royal Oaks Boulevard. Based on the traffic study performed for this project, the majority of traffic will be directed in the northernly direction toward Cool Springs.

STATEMENT OF IMPACTS - WATER AND SEWER:
The proposed project is the construction of 355 new attached dwelling units with a mixture of one, two, and three bedroom units. The project will result in a projected flow of 101,250 GPD. The Northern site will be served by water off of the existing 10" main in the old Riverside Drive ROW, and sewer at the existing manhole behind the Home Depot. The Southern site will be served by water with a new 8" main along Oak Meadow Dr. that will connect from Royal Oaks Blvd. and tie into the 10" main along the old Riverside Drive ROW, and sewer will be served by the existing 24" main that runs along Watson Branch on the subject property. Reclaimed water is not located in the project vicinity.
